

Printer Alignment Test Page for A4 Tri-Plegada Papel Liso  
Vertical

Big.first.name is designed to use the full printing area of your  
badges.

Use this test page to test your printer settings and alignment.

We suggest testing first with plain paper and then with your  
badge stock.

The outer corner squares should be being printed exactly in the  
corners of your paper. If they are not printing exactly in the  
corners then everything else will also be out of alignment.

The lines around each badge show exactly where Big.first.name  
has calculated where the badge edges should be. Therefore the  
grey Print Area should be being printed fully inside each badge.

The print area padding can be changed in Settings.

If you are having trouble printing this test page correctly please  
see the Big.first.name FAQ.
