

Printer Alignment Test Page for Tamanho de cartaz
TABLOID

Big.firstName is designed to use the full printing area of
your badges.

Use this test page to test your printer settings and
alignment.

We suggest testing first with plain paper and then with
your badge stock.

The outer corner squares should be being printed exactly
in the corners of your paper. If they are not printing
exactly in the corners then everything else will also be
out of alignment.

The lines around each badge show exactly where
Big.firstName has calculated where the badge edges
should be. Therefore the grey Print Area should be being
printed fully inside each badge.

The print area padding can be changed in Settings.

If you are having trouble printing this test page correctly
please see the Big.firstName FAQ.
