

Big.first.name

Printer Alignment Test Page for Avery 5141, 5140, 5143
Name Badges

Big.first.name is designed to use the full printing area of
your badges.

Use this test page to test your printer settings and
alignment.

We suggest testing first with plain paper and then with your
badge stock.

The outer corner squares should be being printed exactly in
the corners of your paper. If they are not printing exactly in
the corners then everything else will also be out of
alignment.

The lines around each badge show exactly where
Big.first.name has calculated where the badge edges should
be. Therefore the grey Print Area should be being printed
fully inside each badge.

The print area padding can be changed in Settings.

If you are having trouble printing this test page correctly
please see the Big.first.name FAQ.
