Printer Alignment Test Page for Place Cards DECAdry OCB 3713

Big.first.name is designed to use the full printing area of your badges.

Use this test page to test your printer settings and alignment.

Print

We suggest testing first with plain paper and then with your badge stock.

Area

The outer corner squares should be being printed exactly in the corners of your paper. If they are not printing exactly in the corners then everything else will also be out of alignment.

The lines around each badge show exactly where Big.first.name has calculated where the badge edges should be. Therefore the grey Print Area should be being printed fully inside each badge.

Area

Print

The print area padding can be changed in Settings.

If you are having trouble printing this test page correctly please see the Big.first.name FAQ.
